Subject Index

A
aciculin
  in muscle junctions 419
aconitase
  mitochondrial, NO target 82
actin
  in ATP-deprived cells 194, 195
actin cytoskeleton
  caveolin 234
active oxygen species
  systemic acquired resistance in plants 334–338
adenovirus
  entry into host cells 52–55
  structure 53
adhesion molecules 102–103
  lymphocyte migration and 326–332
adhesion regulators 103
ADP-ribosyl cyclase 435
ADP-ribosylation factor 159
β-adrenergic receptors
  in caveolae 354
  internalization 418
agglutinins
  GPI anchors 43–44
AIDS
  Fas/APO-1 425
amyloid β protein 319
angiogenesis
  SPARC and 280
antigen-presenting cells 326
APO-1 *see* Fas/APO-1
apo-dystrophins 20–21
apoptosis 191–192
  Bcl-2 protein 399–403
  c-Myc-induced 355
  CD4 425
  cellular morphology changes 369
  DNA fragmentation 37–40
  Fas/APO-1 244, 421–426
  genes regulating 394–398
  Grb3-3 280
  p34^{cdc2} 201
  p53 356
  signal transduction regulating 370–374
  suppression by cytokines 355
Arabidopsis
  as auxin model 247
arachidonic acid 197, 198
ARF *see* ADP ribosylation factor
ARG7 marker 300
ATP-binding cassette transporter proteins 311
ATP-deprived cells
  heat-shock proteins protecting 193–195
autoimmune disorder
  Fas/APO-1 423
autonomous replicating sequences 162
autophagy 139–143
auxin 245–249
  inducing gene expression 248–249
  protein binding 247–248
  resistance 247
axonal transport
  retrograde 383–386

B
Bax protein 400
bcl-2 gene 394, 397, 399
  oncogenesis 400–401
  apoptosis 399–403
BiP/GRP78 56
  monitoring unfolded protein levels in ER 60
BMP-2 173, 176
BMP-4 176
BMP-5 173
botulinal toxins 179
brassinosteroids 159
BRU1 gene 159

C
c-*myc*
  as cell death gene 395–396
cadherins
  interaction with integrins 201
CAK 202, 404, 419
calcineurin
  inhibition by cyclosporin 63
  transcription 63
Ca^{2+} (Ca^{2+})
  Bcl-2 and 402
  Ca^{2+}-induced Ca^{2+} release 432
  caveolae in regulation of 234
  in exocytosis 340–341
  intracellular release channels 431–432
  neuronal exocytosis 184
  regulating apoptosis 370–371
  release induced by cyclic ADP-ribose 431–436
  second messenger 198
  signalling in cilia/flagella 305–310
calmodulin 310
  myosin interaction 113
calreticulin
  steroid receptor binding 152–154
CaM kinase
  signal splicing 387
cAMP 141
  regulating apoptosis 371–372
CAPK (ceramide-activated kinase) 222
casein kinase I 251
caveolae 231–235
  β-adrenergic receptors in 232, 354, 418
caveolin
  transmembrane signalling 231
CD4
  apoptosis 372, 373, 425
CD8
  apoptosis 372, 373
CD11b/CD18
  in transepithelial migration 5–6
CD22 73
CD31 (PECAM-1) 329
CD36/LIMP II 293
CD45 73, 74
cdc2
  cyclin complex 204, 251
  intracellular localization at G2–M 204
cdc25 63–64
  in cell cycle checkpoints 204–205
  phosphorylation by p34^{cdc2} kinase 63
  regulation by phosphorylation reactions 202–203
  wee1–cdc25 regulatory system 202–206
cdc genes 97–99, 100
  mutants arresting at G1–S 161–162
CDK 80, 244, 419
  cell cycle regulation 404–405
  inhibitors 437
CDK-activating kinase (CAK) 202, 404, 419
CDK2–cyclin-A 251
cDNA
  pollen 137
ced genes 394–395, 399
cell adhesion
  growth factors 302–303
  integrin cytoplasmic domains 109–112
cell cycle
  cdc25 phosphatase 63–64
  checkpoints 204–205, 405
  Drosophila eye development 391
  G1 phase, *rum1*$^+$ regulation 113
  gene expression 78–79
  protein phosphatase 2A 289–290
  regulation 76–79, 404–405, 437–438
cell death *see* apoptosis
cell division
  signalling 78
cell transformation
  PP2A 289
ceramide
  regulating apoptosis 372–373
chemoattractants
  lymphocyte migration and 326–332
Chlamydomonas
  flagellar waveform 306–307
  gene tagging techniques 299–301
  kinesin-like proteins in flagella 236–239
  phototaxis 308–309
  protein targeting 387

chloroplast protein targeting 387
cholesterol
accumulation in lysosomes 368
intracellular transport 365–368
lipoprotein 149–151
chromaffin cells
exocytosis 1
chromosome replication
initiation 76–78
chromosome segregation
signalling 78
CICR
cADPR modulating 434
cilia
Ca^{2+}-regulated movement 305–310
ciliary neurotrophic factor (CNTF) 383–385
cim transporters 312
Cin8p 239
Cip1 protein 80
CL100 gene 75
clathrin
β-AR internalization 418
triskelions 295
clathrin-independent endocytosis 275–277
clostridial neurotoxins 179–184
coatomers
COP-coated vesicle, assembly 200
COPII 320
interactions of 200
Cockayne's Syndrome 24
coiled bodies 88
collagen
integrin interactions 258–260
triple helix 259
collapsin 8
compartmentalization
vesicle fusion and 159
connexins 26–29
connexin43 8
subunit arrangement 27
COPs *see* coatomers
Creutzfeldt–Jakob disease 10
crinophagy 139
α-crystallins
chaperone activity 159
csw gene 412, 429
cyclic ADP-ribose
inducing Ca^{2+} release 431–436
cyclin cascades 419
cyclin–CDK complexes
in G1 17
cyclin D
binding to Rb 17
cyclin-dependent protein kinases *see* CDKs
cytochrome f 387
cytokines
signalling, JAK tyrosine kinases in 207–211
suppressing apoptosis 355
cytokinesis
Schizosaccharomyces pombe 96–101
cytoplasmic domains
in eggs 166–171
pollen development 134
cytoskeletal proteins
aciculin 419
cytosolic pH gradient
tip growth 157
cytostatic factor 46
cytotoxic T cells (CTLs) 397

D

daf-1 gene 175
DEAD box proteins 271–274
DEAD box motifs 271
DER gene 392
diapedesis 329–332
diphtheria toxin activation
furin involvement 114
DNA polymerase δ 251
DNA repair 24–26
transcription factor b (TFIIH) in 158
DNA replication 48–51
'factories' 50–51
licensing factors 160–165
mobile/immobile DNA polymerases 48–51
monitoring 25–26
suppression via Mos function 281
SV40 250–254
DNA synthesis
epidermal growth factor receptor 388
DNA triplet repeats
nucleosome assembly at 356
DnaA initiator protein 77
DNase I 39–40
DNase II 40
Dp71 apo-dystrophin 20–21
Dp116 apo-dystrophin 20–21
dpp gene 390, 391
Drosophila
cell death genes 395
eye, early pattern formation 389–393
integrins 8, 356
profilin function 243
dual-specificity phosphatase 61
dystrophin
expression in brain 19–20
similarities to cytoskeletal proteins 19–22
dystrophin-related proteins 19–22

E

E2F1
autoregulatory control 355
EGFR signal transduction pathway
Salmonella 198
eggs
cytoplasmic domains 166–171
eIF-4A protein 271, 272
endocytosis
without clathrin 275–277
endodeoxyribonucleases
apoptosis-specific 37–40
endoplasmic reticulum (ER)
domain structure 92
export from 200
mRNA targeting 91–95
protein export from 313
TAPs 311–313
unfolded proteins in 56–60
endosomal sorting motifs 292–296
endosomes
membrane protein targeting to 292–297
epidermal growth factor receptor (EGFR) 294, 388
epidermal nevus 323
epidermolysis bullosa simplex 322–323
epidermolytic hyperkeratosis 322–323
epidermolytic palmoplantar keratoderma 323
epsialin 103
ER *see* endoplasmic reticulum
ER-to-Golgi transport
Sar1p in 158
ERp72 56
Eug1p 56
exine 133
exocytic fusion 1–3
exocytosis 339–341
clostridial neurotoxins 179–184
fusion pore in 1–3
kiss-and-run mechanism 1–3
regulated 121–122
extracellular matrix proteins
integrin-recognition motif 256–261
eya gene 389, 390, 392

F

Fas/APO-1 244, 396–397, 421–426
Fe–S cluster 82, 83
ferritin mRNA translation
NO regulating 84–85
fibronectin
knockout 157
RGD-dependent integrin–ligand interaction 257–258
flagella
Ca^{2+}-regulated movement 305–310
kinesin-like proteins 236–239
fluorescence microscopy
standing-wave excitation 262–265
focal adhesion kinase ($p125^{FAK}$) 102–103
fungal attack of fruit
signals 388
furin proprotein convertase
recycling 114
fusion pore
in exocytosis 1–3

G

G-protein-coupled receptors 232–233
G1 cyclin-dependent kinases 80
G1–S transition
pRb in 15–18

G2–M transition
cdc2 intracellular localization at 204
gap junctions 26–29
carcinogenesis and 29
molecular probes 29
Gas1p/Gpp1p 45
GDF-3 172
GDF-9 172
gene expression
cell-cycle-specific 78–79
Glh-1 protein 273
glucan–mannoprotein complexes 42–43
GLUT-4 292–293
internalization mechanism 124–125
translocation, insulin stimulating 120–125
glutathione *S*-transferases 248
Golgi lipid gradient 350–351
gp210 127, 359
GPI (glycosylphosphatidylinositol)
in yeast cell-wall assembly 42–45
GPI-linked proteins
caveolin and 231–232
GPIIbIIIa integrin
ligand binding 379–382
granzyme B
in cell death 397
Grb3-3
apoptosis 280
growth factors
and extracellular matrix 302–303
membrane anchoring 302–303
GRP78 *see* BiP/GRP78
GRP94 56
GTPase
in exocytosis 341
Ran/TC4 nuclear protein import 47
GxGKT motif 273

H

H_2O_2
metabolism in plants 336–337
as plant 'immune response' mediator 81
haemagglutinin 339
haematopoietic cell phosphatase 75, 429
heat-shock proteins
protecting ATP-deprived cells 193–195
see also individual proteins
heparan sulphate
proteoglycans
matrix tethering 302
hh gene 390, 391, 392
high endothelial venules 327–328
HIV
Fas/APO-1 425
HMG-CoA reductase gene 92
hnRNA transcripts
perichromatin fibrils 86–89
hnRNP K protein 243
HPC-1 (syntaxin) 179–184
hsc73 139
hsp27
in ATP-deprived cells 195
phosphorylation 420
hsp70
in ATP-deprived cells 194, 195
hsp90
in ATP-deprived cells 195
hydrogen peroxide
amyloid β protein toxicity 319

I

ICAM-1 103, 329, 330
binding sites 379, 380
ICAM-2 329
IFN signalling
via JAK family members 210
IFN-γ
in transepithelial migration 6
immune response, plant
H_2O_2 81
immune system
apoptosis-associated genes 395
immunoglobulins
mutated 92
indole-3-acetic acid 245
influenza haemagglutinin 339
inhibins 174
inositol
phospholipid biosynthesis 58
inositol (1,4,5)-triphosphate
cyclic increases 244
receptor 431
insulin
downstream effects, ISR1 in 118
stimulating GLUT-4 translocation 120–125
stimulating recycling 123–124
insulin receptor substrate 1 115–118
integral membrane proteins 127–130
integrins
α_5 knockout 157
α_9 subunit 81
α_v, adenovirus internalization receptors 52–55
cadherin interaction 201
collagen interaction 258–260
cytoplasmic domains 109–112
Drosophila 8, 356
intracellular ligands for 111–112
laminin interaction 260–261
ligand interaction 256–261, 379–382
signalling 102–103
subunit structures 256–257
in transepithelial migration 5–6
VCAM-1 recognition 329
vitronectin-binding 53
interchromatin granules 87–88
interchromosomal channel network 35–37
intermediate filaments
chaperones 159
function 324
genetic disease 321–325
vimentin
cholesterol transport 149–151
intracellular 'immunization' 280
intracisternal granules 92
InvA pathogen 241
invasion plasmid antigens 241
IRE1 gene
encoding protein kinase 57–58
membrane location 57
iron regulatory protein 83–85
ischaemia
and heat-shock proteins 193

J

JAK tyrosine kinases 383
in cytokine signalling 207–211
JH1 domain 208, 209
JH2 domain 208, 209

K

K5 gene 321–323
K14 gene 321–323
KAR2 gene 56
Kar3p 239
KDEL ER retention signal 247
keratin
genetic diseases 321–324
mutation sites 323–324
keratinocyte terminal differentiation 201
kinesin-like proteins
in *Chlamydomonas* flagella 236–239
Kip1p 239
'kiss-and-run' mechanism in exocytosis 1–3
KLP1 gene 236
Kre1p 45

L

L chains 180–182
laminin
integrin interactions 260–261
laminin 1
multidomain structure 260
lamins
binding to chromosomes 316
in nuclear envelope reassembly 314–318
Xenopus 314
LAP 1 127, 128
LAP 2 127, 128
LcrD pathogen 241
Leishmania tarentolae
mitochondrial tRNA 283–284
leukotriene D_4 197
LFA-1 integrin 102
ligand binding 379–382
LGP120 142
licensing factor
DNA replication 160–165
LIMP II 293
lipids
plasma membrane 350–353
retrograde traffic 81

second messengers 219–223
lipoprotein
cholesterol 149–151
low-density lipoprotein receptor 294
lymphocyte vascular adhesion protein (L-VAP-2) 103
lymphocytes
recirculation and homing 326–332
lysophosphatidic acid (LPA) 213–218
lysosomal acid phosphatase 293
lysosomal cholesterol
storage and transport 366–367
lysosomal sorting motifs 292, 296
lysosomes
cytosolic protein transport into 139
membrane protein targeting to 292–297

M

M phase 437
mcl-1 gene 400
MCM2-3-5 proteins 160–165
homologues 163–164
macroautophagy 140–142
mad-cow disease 10
Manduca sexta
cell death genes 395
mannoprotein–glucan complexes 42–43
mannose-6-phosphate receptor 365
MAP kinase 197, 199, 420
metaphase arrest 46
Raf–MAP-kinase cascade 215
RTK-induced activation 409–412
MAP kinase cascade 243, 347–349
MAP kinase kinase kinase (MAPKKK) 80
MAP kinase phosphatase 62, 75
MAP-2 protein 91
MAPKAP kinase-2 420
MARCKS
regulation by PKC 225–226
mast cells
exocytosis 1
maturation-promoting factor (MPF) 46, 202, 404
see also p34, p34^{cdc2}
MDCK cells
clathrin-independent endocytosis 276
meiosis
pollen 132–137
melanoma
cell adhesion molecules and 103
membrane proteins
targeting to endosomes/lysosomes 292–297
membrane ruffles 196
metal-ion-binding sites 381–382
metaphase arrest
MAP kinase 46
MHC class I molecules
TAP association 312
microautophagy 139–140
β_2-microglobulin
TAP association 312
mitochondria
RNA import into 282–286
mitotic regulation
wee1–cdc25 system 202–206
see also p34, p34^{cdc2}, maturation promoting factor
MO15 protein kinase 419
morphogenetic furrow (*Drosophila*) 389
Mos 46
DNA replication suppression 281
MPF *see* maturation promoting factor
mpk-1 (*sur-1*) gene 412
MPM-2 epitope kinase 203
mRNA
ferritin, NO regulating 84–85
localization 9, 91–92
pre-mRNA processing 87, 89, 35–37
splicing components, organization in nucleus 36–37
targeting to endoplasmic reticulum 91–95
'tracks' 36
transport, nucleocytoplasmic 278–279
Vg1, delocalization 387
multistep adhesion cascade 328–329, 330
Munc-18 protein 184
muscular dystrophies
gene mutations 19–22
MxiA protein 241
myogenic cell lines 281
Myo2p
calmodulin interaction 113
myosin
in ATP-deprived cells 194

N

N-formyl peptides 5
in neutrophil movement 5
nerve growth factor (NGF) 383–385
neurite retraction
LPA inducing 217
neuronal differentiation
PTPase role 73–74
neuronal exocytosis
tetanus/botulinal toxins inhibiting 179–184
neurotoxins
clostridial 179–184
neurotransmitter release 1–3
quantal, from early endosomes 155–156
neurotrophic factors
signal transduction 383–386
neutrophil transmigration
endothelial/epithelial contrast 7
neutrophil–epithelial interactions 4–7
neurotrophins
receptors 383–384
NGF *see* nerve growth factor
NIT1 300
nitric oxide
post-transcriptional cellular iron control 82–85
NLSs *see* nuclear localization sequences
NO synthase 82
NOP1 46
NOP2 46
Notch gene 392
NP-C gene 365–368
NSF (*N*-ethylmaleimide-sensitive factor) 184
NSP1 363
NUC-18
in apoptosis 38–39
nuclear envelope
disassembly in mitosis 128–129
integral membrane proteins 127–130
precursor vesicles 314–316
reassembly 129–130, 314–318
nuclear localization sequences
nucleolar proteins binding 414–417
nuclear pore complex proteins 46, 357–364
repeat motifs 359
nuclear pore membrane proteins 127–130
nucleocytoplasmic mRNA transport 278–279
nucleolar proteins
binding NLSs 414–417
nucleosome assembly
at DNA triplet repeats 356
nucleotide-excision repair 24
NUP100 364
NUP107 362
NUP116 363, 364
NUP145 363
NUP153 362, 363
NUP180 362, 363
NUP214 362, 363
nur77
as cell death gene 395–396

O

oncogenesis
bcl-2 gene 400–401
O-linked GlcNAc
nuclear pore complex proteins 363
oocytes
cytoplasmic domains 166–167
optical sectioning microscopy 262–265
ORC complex 254
otefin 127
oxidative stress 373

oxygen radicals
in apoptosis 373
free, metabolism, Bcl-2 and 402

P
p21 80
p28
in mitosis 101
p34
in cytokinesis 100
in mitosis 101
see also p34^{cdc2}, maturation promoting factor
p34^{cdc2}
apoptosis and 201
cyclin B complex, regulation by cdc25 63
p40 437
p53
apoptosis 356
inhibiting radiation-induced cell death 396
tumour suppression 80
p58 127, 128
p62 345, 346, 362
p80 88
p100 437
p125^{FAK} (focal adhesion kinase) 102–103
p260 362, 363
pair-rule genes 93
Paramecium
Ca^{2+} channels in cilia 305–306
PDI/ERp59 56
PDI1 gene 56
PECAM-1 (CD31) 329
peptidyl–prolyl *cis–trans* isomerase 56
perforin
calreticulin association 154
in cell death 397
perichromatin fibrils 86–89
pH changes
in apoptosis 373
Phaseolus vulgaris
mitochondrial tRNA 282–283
phenylalanine 335, 335–336
phosphatidylcholine
internalization 81
phospholipases 219–223
PLC 220–221
PLD 221
phospholipid-transfer protein
sensor role 113
phospholipids
biosynthesis 58
see also lysophosphatidic acid
phosphorylation
in cytokinesis 100
integrins 102–103
Src 74
see also tyrosine phosphorylation
plasma membrane
caveolae 231–235
lipid composition 350–353
Raf activation in 348–349
pollen 132–137
stigma recognition 135
pollen tube 136–137
poly(A)$^+$ RNA 87, 88, 89
POM121 127, 359
POM152 359, 363
potocytosis 231
pRb 15–18
prion diseases 10–14
profilin 243
programmed cell death *see* apoptosis
protein degradation
lysosome-mediated 139–143
protein disulphide isomerase 56
protein electrophoresis
two-dimensional 439–441
protein kinase C 223–227
activation 223–224
disease and 226
lipid-binding domains 223–224
regulating apoptosis 371
protein oligomerization
in TGN 8
protein phosphatases 61–64
inhibitors 62
new 62
regulation 61–62
RNA splicing 63
signalling cascade 63
see also protein phosphatase 2A, protein tyrosine phosphatase cdc25
protein phosphatase 2A 251, 287–291
cell transformation 289
mutants 289–290
structures 287–288
protein phosphorylation
controlling SV40 DNA replication 250–254
protein translocation
solvent lock 420
ubiquitin assay 355
protein tyrosine kinases *see* tyrosine kinases
protein tyrosine phosphatases (PTPases) *see* tyrosine phosphatases
PRP2 272, 273
PRP16 272, 273
PrP^C
biosynthesis 11–12
PrP^{Sc} 11–12
prion linkage 12
PSTPase 61
regulatory domains 62
PTP1C 75
PTP1D 75
PTPases *see* protein tyrosine phosphatases

R
rab proteins
tight junctions 114
RAD3 protein
in DNA repair 158
Raf
interaction with Ras 243, 319, 347–349
Raf–MAP-kinase cascade 215
Ran/TC4
nuclear protein import 47
Ras
interaction with Raf 243, 319, 347–349
intracellular immunization 280
LPA activating 215–216
Sos activating 419
Ras–MAP-kinase cascade 409–412
Ras1 gene 391
RB gene expression
cell cycle clock and 15–18
receptor tyrosine kinases (RTKs) 409–413
recycling
GLUT-4 retention 125
insulin stimulation of GLUT-4 120–125
TGN proteins 114
regulated exocytosis 121–122
retrograde axonal transport 383–386
RGD motif 256–261, 356
ribosome biogenesis
nucleolar proteins 414–417
RNA
export mechanisms 201
extranucleolar transcription sites 88
helicases 271–274
import into mitochondria 282–286
poly(A)$^+$ 87, 88, 89
see also mRNA; tRNA
RNA binding
Sam68 346
Src target 243
RNPs
nuclear pore complexes mediating exchange 357–364
rolC gene 248
RTKs 409–413
rum1$^+$ gene
regulating cell cycle progression 113
'Russell bodies' 92
rux gene 391, 392
ryanodine receptor 431
cADPR modulating 433–434

S
S phase 437
salicylic acid
metabolism 335–336
systemic acquired resistance 81, 334–338
Salmonella
epithelial attachment 5
invasion of cells 196–198
neutrophil migration 5
subverting signal transduction pathways 196–199
virulence protein export 240–242
Sam68 345–346
function 346
Sar1p
in ER-to-Golgi transport 158
SC-35 splicing factor 87, 88
scrapie agent 10–11
Sec proteins
forming COPII 320
Sec13p complex 46

second messengers
lipid 219–223
sep1 gene 97
serine/threonine kinase receptors
175–176
see also Raf
SH2 domains
PTPases 74–75
specificity 320
Tyr(P)-IRS1 association
116–118
SH3
binding to 243
Sam68 domain-binding
protein 346
Shigella
virulence protein export
240–242
signal transduction
auxin 245–249
Ca^{2+} spatial model 309–310
caveolae 231–235
crosstalk 373–374
Fas/APO-1 421–423
inside-out signalling
109–110
insulin receptor substrate 1
115–118
integrins 102–103
JAK protein tyrosine kinases
207–211
lipid 219–223
LPA-initiated cascades
213–218
neurotrophic factors
383–386
Raf kinase 243
receptor tyrosine kinases
409–413
regulating apoptosis
370–374
Salmonella subverting
pathways 196–199
splicing 387
signalling pathway
linking ER and nucleus 56
SNAP-25 179–184
SNARE hypothesis 184
so gene 389, 390
Solanum tuberosum
mitochondrial tRNA 282–283
'solid-state' nucleocytoplasmic
transport 278
sorting motifs 292–297
Sos
activating Ras pathway 419
SPARC protein
in angiogenesis 280
sphingomyelin
post-Golgi synthesis site
351–352
resynthesis in endocytic
pathway 352–353
sphingosine-1-phosphate (S_o-P)
222–223
Src tyrosine kinases
mitotic function 345–346
regulation by phosphorylation
74
Sso1p and Sso2p 9
standing-wave fluorescence
microscopy 262–265
Star gene 391
STAT transcription factors 383
steroid receptors
calreticulin binding 152–154
stg gene 391, 392
sur-1 (*mpk-1*) gene 412
SV40 DNA replication 250–254
SV40 small t 80
synaptobrevin (VAMP)
179–184, 339–340
synaptobrevin–syntaxin
interactions 158
syntaxin
HPC-1 179–184
in vesicular transport 9
systemic acquired resistance
81, 334–338

T

T antigen
in SV40 DNA replication
250–254
phosphorylation 251–252
thermolabile 281
TAP genes 311–313
tetanus toxin 179
L chain 180–182

virulence protein export
240–242
vitronectin receptor binding
53, 257

W
WAF1 gene 80
wee-1 protein
in cell cycle checkpoints
204–205
regulation by multiple kinases
203
wee1–cdc25 regulatory
system 202–206

X
XB_2 and XB_3 lamins 314
xeroderma pigmentosum 24
XFXFG repeat proteins
nuclear pore complex 363

Y
yeast
autophagy 142–143
cell-wall assembly, GPIs in
42–45
MCM2-3-5 proteins
160–165
mitochondrial tRNA
284–285
phospholipid biosynthesis
58
unfolded-protein-response
pathway 56–60
Yersinia
protein tyrosine phosphatase
427–428
virulence plasmid 240
Yop proteins 428

Back Issues of Elsevier Trends Journals

Back issues from 1993 and 1994 are available to our customers at the following rates. Please state which issue(s) and quantity you require, including the volume and number (or year and month).

Issues(s): _____

_____

_____

Please tick how many copies you would like below. Back issues are available in bulk at discounted rates – institutions/libraries must pay institutional rates.

Individual Rates

- ❑ Single copy £16.00/$25.00 each
- ❑ Five copies £68.00/$106.00 (includes 15% discount)
- ❑ Ten copies £120.00/$187.00 (includes 25% discount)

Institutional Rates

- ❑ Single copy £33.00/$52.00 each
- ❑ Five copies £140.00/$218.00 (includes 15% discount)
- ❑ Ten copies £248.00/$387.00 (includes 25% discount)

*Hardbound compendia of previous volumes are available to institutional subscribers. Please ask for further details.

PAYMENT METHOD:

- ❑ Personal cheque, Eurocheque, or money order made payable to **Elsevier**
- ❑ Credit card
  - ❑ Visa ❑ Mastercard ❑ American Express

Card no: _____
